John,

P.S. 156 located at 229 - 07 137th Avenue in Queens had a visibly smoking ballast in office200A this morning 10/10. The room was immediately secured. A fan was put in place to aid in ventilation. Fixture removal and wipe samples will happen tonight. The environmental contractor will provide additional ventilation with a blower unit. The room will remain closed pending wipe sample results. Parent notification letters will be sent. I will update you once wipe sample results are returned.

Subject: P.S. 157 Bronx external leak

Good morning John:

P.S. 157 located at 757 Caldwell Avenue in the Bronx reported a burning odor from a light fixture in room 224 on Thursday 10/3. The room was immediately evacuated and secured. Our environmental contractor inspected the light fixtures in the room and found 6 leaking PCB ballasts. All ballasts and fixtures were removed Thursday evening. Prior to re-occupancy, the custodian noticed dried pieces of a tar like substance on the floor and a student's desk. Our environmental contractor re-inspected the room last night and confirmed that the tar may contain PCB's. The environmental contractor disposed of the impacted student desk as PCB contaminated waste and cleaned the impacted floor using Capsur. Our environmental consultant will take wipe samples of the impacted floor today. The room will remain closed until favorable wipe results are returned. Parental notification letters were sent.

Let me know if you have any questions.

John,

P.S. 132 located at 1245 Washington Avenue in the Bronx had a visibly smoking ballast in room #B17 last night 9/26. The room was immediately evacuated and secured. A fan was put in place to aid in ventilation. Fixture removal and wipe

samples will happen today. The environmental contractor will provide additional ventilation with a blower unit. The room will remain closed pending wipe sample results. Parent notification letters will be sent. I will update you once wipe sample results are returned.

Subject: RE: PS 206 Brooklyn 2 smoking ballast incidents 9/26

Good afternoon John:

As a follow up to my previous email, 3 fixtures were removed from room 301, they contained 3 leaking PCB ballasts. 5 fixtures were removed from room 414, they contained 5 leaking PCB ballasts. Wipe samples were taken from both rooms and have been returned. All sample results are below the federal action level of 10 ug/cm². Both rooms will be re-occupied. Parent notification letters will be sent. We ventilated each room with a pedestal fan and blower unit.

Blower (max rating 980 cfm) has been running for over 22 hours in classroom 301 which is 10,100 cuft. I used 700 cfm (in case the duct had a bend). 700 cfm x 1320 minutes / 10,100 cuft = 91 air changes.

Blower (max rating 980 cfm) has been running for over 21 hours in classroom 414 which is 14,600 cuft. I used 700 cfm (in case the duct had a bend). 700 cfm x 1260 minutes / 14,600 cuft = 60 air changes.

John,

Two ballast panels were reported in K084 this morning. I added K084 to the attached spreadsheet. Our environmental contractor will inspect on Monday and we will prioritize removals based on the findings. I will keep you posted.

From: Napolitano Philip
Sent: Monday, August 26, 2013 12:10 PM
To: 'Gorman, John' (Gorman.John@epa.gov)
Subject: Remote ballast panel information

Good afternoon John,

Attached is a list of schools that, based on current information, have remote ballast panels or individual remote ballast boxes. There appears to be two different configurations. Ten schools have remote ballast panels that are in the hallway which control the classroom lighting. Six schools have remote ballasts for the gym or the auditorium. Other than custodian engineer visual inspections, we currently do not have a plan to internally inspect the cabinets or ballast boxes in these schools. As in the past, our custodians and skilled trades personnel will continue to report specific ballast failures or instances that may warrant an inspection from our environmental contractor. Moving forward, I will update you if there are changes to the attached list.

Regards,
Phil

Remote Ballast Panels		
Borough	Bldg. ID	Comments
Bk North	16K081	4 Panels; 2 on each floor, 3rd & 4th Fl. Hallways. (T12 building upgrade to begin in Fall 2013)
Bk North	19K328	6 Panels (All ballasts were removed by SCA Summer 2013)
Bk South	21K303	1 ballast panel located in room 144. School was converted to T8's in 2011.
Bk South	21K370	1 panel located in 2nd floor hallway for auditorium light fixtures.
Bronx	11X160	Rm. 224 & 330 2 panels.
Bronx	11X455	1 Panel.
Bronx	09X126	4 panels; 2 on each floor. 1st and 2nd floors
Bronx	12X047	2 Panels located in Auditorium
Manhattan	05M030	6 panels; 2 on each floor. 2nd, 3rd and 4th floors
Queens	26Q430	1 panel located in gymnasium
Queens	25Q025	Room B28, 1 Panel
Queens	30Q017	3 Racks located in gymnasium
Queens	28Q174	1 Panel located in gymnasium
Staten Island	31R032	4 panels; 2 on each floor. 2nd and 3rd floors
Bk North	15K834	Remote ballasts located on stage power gymnasium lights T12 building (SCA upgrade in progress)

Bk North	23K332	4 panels located in the hallways. T12 ballasts have been removed this summer by SCA
Bk North	14K084	2 panels. 1 located in 249 bathroom. 1 located in 255 bathroom.

Wipe samples were taken and have been returned. Sample results are below the federal action level of 10 ug/cm². The classroom will be re-occupied. Parent notification letters will be sent. We ventilated with a pedestal fan and a blower unit.

The blower (max rating 980 cfm) has been running for over 48 hours in the classroom that is 8,500 cuft. I used 700 cfm (in case the ducts had a bend). 700 cfm x 2880 minutes / 8,500 cuft = 237 air changes.

John:

P.S. 185 located at 147-26 25 Drive in Queens had a visibly smoking ballast in room 305 today 9/12. The room was immediately evacuated and secured. A fan was put in place to aid in ventilation. The environmental contractor will provide additional ventilation with a blower unit. Fixture removal and wipe samples will happen tonight. The room will remain closed pending wipe sample results. Parent notification letters will be sent. I will update you once wipe sample results are returned.

As a follow up to my previous email, 1 fixture was inspected and found to contain 1 intact PCB ballast from room 201. Wipe samples were taken and have been returned. Sample results are below the federal action level of 10 ug/cm². The room will be re-occupied. Parent notification letters will be sent. We ventilated with a pedestal fan and blower unit.

The blower (max rating 980 cfm) has been running for over 20 hours in the room that is 7500 cuft. I used 700 cfm (in case the duct had a bend). 700 cfm x 1200 minutes / 7500 cuft = 112 air changes.

To: Gorman, John
Subject: Remote ballast panel information

Good afternoon John,

Attached is a list of schools that, based on current information, have remote ballast panels or individual remote ballast boxes. There appears to be two different configurations. Ten schools have remote ballast panels that are in the hallway which control the classroom lighting. Six schools have remote ballasts for the gym or the auditorium. Other than custodian engineer visual inspections, we currently do not have a plan to internally inspect the cabinets or ballast boxes in these schools. As in the past, our custodians and skilled trades personnel will continue to report specific ballast failures or instances that may warrant an inspection from our environmental contractor. Moving forward, I will update you if there are changes to the attached list.

Regards,
Phil

Remote Ballast Panels

Borough	Bldg. ID	Comments
Bk North	16K081	4 Panels; 2 on each floor, 3rd & 4th Fl. Hallways. (T12 building upgrade to begin in Fall 2013)
Bk North	19K328	6 Panels (All ballasts were removed by SCA Summer 2013)
Bk South	21K303	1 ballast panel located in room 144. School was converted to T8's in 2011.
Bk South	21K370	1 panel located in 2nd floor hallway for auditorium light fixtures.
Bronx	11X160	Rm. 224 & 330 2 panels.
Bronx	11X455	1 Panel.
Bronx	09X126	4 panels; 2 on each floor. 1st and 2nd floors
Bronx	12X047	2 Panels located in Auditorium
Manhattan	05M030	6 panels; 2 on each floor. 2nd, 3rd and 4th floors
Queens	26Q430	1 panel located in gymnasium
Queens	25Q025	Room B28, 1 Panel
Queens	30Q017	3 Racks located in gymnasium
Queens	28Q174	1 Panel located in gymnasium
Staten Island	31R032	4 panels; 2 on each floor. 2nd and 3rd floors
Bk North	15K834	Remote ballasts located on stage power gymnasium lights T12 building (SCA upgrade in progress)

Bk North	23K332	4 panels located in the hallways. T12 ballasts have been removed this summer by SCA

The occupant in the office reported a burning odor(from an unknown source). Due to the hypersensitivity at the school surrounding smoking light fixtures, it was assumed it was from a ballast. The contractor arrived on site a few hours later, and found all lights to be working with no smoke or odor present. Upon questioning, school staff confirmed the light fixtures did not smoke.

John,

As a follow up to my previous email, the PCB ballasts were removed from the cabinets. The impacted surface within the cabinets was cleaned by our environmental contractor and wipe samples were taken. The wipe test results are below the detection limit. We ventilated with fans and blower units.

The blowers (max rating 980 cfm) ran for over 24 hours in each of the hallways that are 4700 cuft. I used 700 cfm (in case the duct had a bend). $700 \text{ cfm} \times 1440 \text{ minutes} / 4700 \text{ cuft} = 214 \text{ air changes}$.

P.S. I am still working on a list of the other buildings that contain these types of ballast panels. I will keep you posted.

Regards,
Phil

Subject: P.S. 32 Staten Island Leaking ballast contained to an electrical panel.

John:

I wanted to give you a heads up on some findings at P.S. 32 Staten Island located at 32 Elverton Avenue. This is one of a few buildings built in the 1960's that have ballast cabinets in the hallways. These ballasts provide the power to the light fixtures in the classrooms. The custodian inspected the hallway cabinets and found leaking PCB ballasts in cabinets on the 3rd and 2nd floors for a total of 3 cabinets. We are currently developing a plan of attack for ballast removal, cleaning, and testing. The school is closed for the summer. The cabinets may require cleaning, so I will keep you posted on any wipe sampling results. Here are some of the details:

2nd floor cabinet outside room 239: 6 leaking PCB ballasts, all are Universal 806 – BR. No manufacture date
3 Intact PCB ballasts, all are Magnetek 806-SLH-TC-P. No manufacture date

3rd floor cabinet outside room 310: 6 leaking PCB ballasts, all are Universal 806 – BR. No manufacture date
3 Intact PCB ballasts, all are Magnetek 806-SLH-TC-P. No manufacture date

3rd floor cabinet outside room 308: 4 leaking PCB ballasts, all are Universal 806 – BR. No manufacture date
2 intact PCB ballasts, Universal 806 – BR. No manufacture date
2 Intact PCB ballasts, Magnetek 806-SLH-TC-P. No manufacture date
1 leaking NON PCB ballast.

Regards,
Phil

John:

As a follow up to my previous email, 3 fixtures containing 1 leaking pcb ballast (smoke), and 2 non pcb ballasts was removed from room B3. Wipe samples were taken and have been returned. Sample results are below the federal action level of 10 ug/cm². The room will be re-occupied. Parent notification letters will be sent. We ventilated with a pedestal fan and blower unit. The school is currently undergoing a lighting upgrade.

The blower (max rating 980 cfm) has been running for over 48 hours in the room that is 3960 cuft. I used 700 cfm (in case the duct had a bend). $700 \text{ cfm} \times 2880 \text{ minutes} / 3960 \text{ cuft} = 509 \text{ air changes}$.

Good morning John:

P.S. 265 located at 101 Park Avenue in Brooklyn had a visibly smoking ballast in room B3 earlier today 8/7. The room was immediately secured. A fan was put in place to aid in ventilation. Our environmental contractor will inspect/remove the fixture today. They will also provide additional ventilation with a blower unit. Wipe samples will be taken as well. The room will remain closed pending wipe sample results. Parent notification letters will be sent when student return from summer recess. The school is currently undergoing a building wide lighting replacement. I will update you once wipe sample results are returned.

Good afternoon John:

As a follow up to my previous email, 3 fixtures were removed from room 106, they contained 1 intact PCB ballast, 1 leaking PCB ballast(smoke) and 1 NONPCB ballast with historical staining. 3 fixtures were removed from room 102, they contained 1 leaking PCB ballast(smoke), 2 NONPCB ballasts with historical staining. 3 fixtures were removed from room 209, they contained 2 leaking PCB ballasts (smoke), 1 NONPCB ballast with historical staining. 3 fixtures were removed from room 305, they contained 3 leaking PCB ballasts. Wipe samples were taken from the 4 rooms and have been returned. All sample results are below the federal action level of 10 ug/cm². One sample from the floor in room 305 was above the detection limit. Our environmental contractor will clean the area where the sample was taken and we will re-test. Rooms 106, 102, 209 will be re-occupied. Parent notification letters will be sent once students return from summer recess. We ventilated each room with a pedestal fan and blower unit. I will update you on room 305 when the next set of results are returned.

Blowers (max rating 980 cfm) have been running for over 24 hours in each of the classrooms 9220 cuft(per room). I used 700 cfm (in case the duct had a bend). 700 cfm x 1440 minutes / 9220 cuft = 109 air changes.

Smoking ballast info

Room 106: GE, no date, no thermal protection

Room 102: GE, no date, thermally protected

Room 209: GE, no date no thermal protection

Room 305: Ballast info was not legible
